The City of Elgin, Illinois Selects Geographic Technologies Group (GTG) to Implement New GIS Software Solutions

Longview, TX – Geographic Technologies Group, Inc. (GTG) announced today that the **City of Elgin, Illinois** has procured LGviewer and LGweb from GTG's LG GIS software suite. The City also secured LGwork orders and LGcommunity Connect maintenance module.

LGviewer provides a set of GIS tools in a simple to use desktop application. LGviewer allows for visualization of land management information. Local government professionals have long desired the ability to map and analyze the spatial distribution of all data that is tracked within their data storage. The land management module allows users to assign locations to each land management record. The LGviewer software is designed to leverage database data along with existing GIS data to provide a powerful set of tools for visualization and analysis. LGweb is an Intranet GIS data browser that allows everyone from employees, managers, and field crew to be able to visualize GIS data in conjunction with billing, consumption, work order, and other data residing in the City's land management databases.

James Kelt, Regional Manager for GTG, stated that, "Traditionally, GIS data and software were limited to only a select few individuals at each agency. Today, with LGviewer and LGweb, the City of Elgin can now present powerful GIS tools and data to every employee in the agency. These tools are specifically designed to leverage the investment in GIS and Land Management locations in a seamless and enterprise-wide environment. Additional tools such as the work order management and community maintenance applications, allow certain users to use the LG products to maintain the land management database from the map."

About Geographic Technologies Group, Inc. (GTG):

GTG is a full-service local government GIS consulting company offering specialized experience in the planning, design, implementation, and procurement of geo-technologies. GTG has unmatched technical GIS capabilities, demonstrated successes, international experience, and a reputation for successfully implementing the right solutions. GTG develops GIS products that spatially enable various enterprise solutions and integrates an organization's IT investment via a common interface. GTG also offers stand alone products for land management, public safety, public access, touch screen technology, and utilities.

GTG has over 700 clients located throughout North America and Europe and serves all levels of government as well as the private sector. To support our clients, GTG maintains four offices located across the United States: Headquarters in North Carolina, and Regional Offices in Texas, Florida, and Missouri.
