GTG Integrates Geo Blade and FIREHOUSE®

GOLDSBORO, N.C. – Geographic Technologies Group (GTG) has integrated with FIREHOUSE® Software (FIREHOUSE® Software is a registered trademark of ACS) making it easier than ever for organizations to view critical public safety data via a mapping interface.

GTG has created a procedure to extract incident and other pertinent information from the FIREHOUSE® database and map the information in our Geo Blade line of products. This allows users to view the data on a user-friendly, easy-to-use mapping interface.

In Titusville, Fla., personnel are using GTG's integration services to keep incident information organized and easily accessible for viewing and reporting purposes. Data has been sub-categorized into incident type, such as Fire, EMS, Auto Accident, etc. GTG has configured Geo Blade to incorporate the FIREHOUSE® data. Now all tools and functionality originally used in Geo Blade can be incorporated with FIREHOUSE®. Users can perform spatial selections or enter search criteria to create and view reports.

Goldsboro, N.C. is using GTG to integrate with FIREHOUSE® to track maintenance on fire hydrants. GTG is able to populate the FIREHOUSE® database from the GIS data the City currently maintains. Combining the two databases will allow the City to synchronize work performed on hydrants.

"GTG is delighted to provide local governments a simple solution to view fire incident and maintenance data," said Curt Hinton, CEO of GTG. "This integration with Geo Blade will provide organizations a Return on Investment allowing them to stay better informed and to protect their community more effectively."

For more information on services offered by GTG, visit us on the Web at www.geotg.com or call 888-757-4222.

FIREHOUSE® Software is a registered trademark of ACS.

About Geographic Technologies Group, Inc.:

GTG is a full-service local government GIS consulting company offering specialized experience in the planning, design, implementation, and procurement of geo-technologies. GTG has unmatched technical GIS capabilities, demonstrated successes, international experience, and a reputation for successfully implementing the right solutions. GTG develops GIS products that spatially enable various enterprise solutions and integrates an organization's IT investment via a common interface. GTG also offers stand alone products for land management, public safety, public access, touch screen technology, and utilities.

GTG has more than 700 clients located throughout North America, the Caribbean, and Europe and serves all levels of government as well as the private sector. To support our clients, GTG maintains four offices located across the United States: Headquarters in North Carolina, and Regional Offices in Texas and Florida.
