

The City of Folsom, California Selects Geographic Technologies Group (GTG) to Implement New GIS Software Solutions

Longview, TX – Geographic Technologies Group, Inc. (GTG) announced today that the **City of Folsom, California** has procured additional products from GTG's LG GIS software suite. The City will be implementing licenses of LGdispatch software to expand the City's existing LG platform.

LGdispatch is a Computer Aided Dispatch (CAD) mapping interface that provides E-911 dispatchers with an interactive map displaying the location of all emergency calls. LGdispatch offers advanced geo-coding capabilities, AVL mapping, locations of active CAD calls, Phase II call locations among other GIS functionality. Addresses can be validated against address points, polygons (tax parcels) and lines (road network).

James Kelt, Regional Manager, stated that, "Over the past 2 years, the City of Folsom has aggressively pursued a comprehensive, enterprise GIS. One aspect of this agenda is providing mapping solutions to virtually every department at the City. One critical part of their GIS is in the Public Safety realm. With LGdispatch, the Police Department will now be able to tap into their Computer Aided Dispatch database for use in GIS. This means that dispatchers will have a seamless mapping interface that will show all active CAD calls, Phase II locations, aerial photography, and any GIS dataset necessary to help first responders arrive on scene in a timely manner. When seconds count, it is imperative that dispatchers have as much information about the situation as possible. LGdispatch is specifically designed to empower its users with this data but is streamline enough not encumber the user with complicated queries and tasks."

The City's continued utilization of GTG's LG products highlights the value of our products as an integrated and comprehensive set of GIS solutions that leverage the City's investment in their current applications. As with other fast-growing communities, the City of Folsom has embraced cutting-edge technology to improve public safety services for its citizens.

About Geographic Technologies Group, Inc. (GTG):

GTG is a full-service local government GIS consulting company offering specialized experience in the planning, design, implementation, and procurement of geo-technologies. GTG has unmatched technical GIS capabilities, demonstrated successes, international experience, and a reputation for successfully implementing the right solutions. GTG develops GIS products that spatially enable various enterprise solutions and integrates an organization's IT investment via a common interface. GTG also offers stand alone products for land management, public safety, public access, touch screen technology, and utilities.

GTG has over 700 clients located throughout North America, the Caribbean, and Europe and serves all levels of government as well as the private sector. To support our clients, GTG maintains six offices located across the United States: Headquarters in North Carolina, and Regional Offices in Florida, Illinois, Oregon, Pennsylvania and Texas.
