

Geographic Technologies Group Introduces Geo Blade Water

Goldsboro, N.C. – Geographic Technologies Group, Inc. (GTG), an industry-leading GIS solutions provider, announces the release of Geo Blade Water. Geo Blade Water is ESRI compliant and operates with ArcGIS Server.

Geo Blade Water makes managing water systems easier than ever with its user-friendly mapping interface. Geo Blade Water offers customized water reporting and several convenient functions including the ability to add and delete features, update feature attributes, manage data quality control features, and the ability to copy and reassign attributes. Any user GeoDataBase/water database model is easily integrated into the application.

Geo Blade Water is one of many department-specific “blades” incorporated into the Geo Blade software suite. Blades are additional functionalities to the core viewer, specific to an agency’s departmental needs.

“GTG has worked with hundreds of clients throughout the United States and has noted that the GIS utility based maintenance systems are very pricey for the average local government user,” said Curt Hinton, CEO of GTG. “Geo Blade Water is the first in a series of utility blades that will offer all of the functions needed by the users at a much more competitive price point. The Sewer blade is nearing completion and will soon be followed by the work order, stormwater, electric, and gas blades. Geo Blade Water makes tasks that were once very tedious and time consuming very simple thanks to the ease-of-use of the Geo Blade toolset.”

For more information on the Geo Blade software suite, visit www.geotg.com/geoblade.html or call 888-757-4222.

About Geographic Technologies Group, Inc. (GTG):

GTG is a full-service local government GIS consulting company offering specialized experience in the planning, design, implementation, and procurement of geo-technologies. GTG has unmatched technical GIS capabilities, demonstrated successes, international experience, and a reputation for successfully implementing the right solutions. GTG develops GIS products that spatially enable various enterprise solutions and integrates an organization's IT investment via a common interface. GTG also offers stand alone products for land management, public safety, public access, touch screen technology, and utilities.

GTG has over 700 clients located throughout North America and Europe and serves all levels of government as well as the private sector. To support our clients, GTG maintains three offices located across the United States: Headquarters in North Carolina, and Regional Offices in Texas and Florida.
