

Geographic Technologies Group's GeoBlade Crimes Saves Time, Money, and Lives

Goldsboro, N.C. – Geographic Technologies Group, Inc. (GTG) is at the top of their game when it comes to GIS, and they are using their expertise to save time, money, and lives. Their newly released GeoBlade Crimes is guaranteed to make a difference in local government organizations across the nation.

GeoBlade Crimes is just one of the multitudes of “blades” incorporated into the GeoBlade toolset. Blades are additional functionalities to the core viewer, specific to an agency's departmental needs. GeoBlade Crimes is designed to give Police and Sheriff Departments the ability to make intelligent decisions that will help make their city or county a safer place to live.

GeoBlade Crimes also gives public safety users the ability to create pin maps for incidents, accidents, arrests, citations, and sexual predators in a seamless GIS interface that directly connects to an organization's Crime Record Management databases. This application gives users the ability to run geographic analysis for crime trends, generate high quality incident reports, and print maps with crime data.

GeoBlade Crimes is unique due to its ability to leverage any Crime RMS platform and the fact that it is built on the latest ESRI technology; this gives users a true return on investment that leverages their existing GIS and Crimes RMS platforms. GeoBlade Crimes is the bridge between these two applications that puts incident and GIS data in the hands of every public safety official.

“GeoBlade Crimes is the most powerful enterprise-wide crime analysis package,” said James Kelt, Regional Manager for GTG. “It gives officers the ability to see crime data in a whole new light.”

For more information on the GeoBlade software suite, visit www.geotg.com/geoblade or call 888-757-4222.

About Geographic Technologies Group, Inc. (GTG):

GTG is a full-service local government GIS consulting company offering specialized experience in the planning, design, implementation, and procurement of geo-technologies. GTG has unmatched technical GIS capabilities, demonstrated successes, international experience, and a reputation for successfully implementing the right solutions. GTG develops GIS products that spatially enable various enterprise solutions and integrates an organization's IT investment via a common interface. GTG also offers stand alone products for land management, public safety, public access, touch screen technology, and utilities.

GTG has over 700 clients located throughout North America and Europe and serves all levels of government as well as the private sector. To support our clients, GTG maintains four offices located across the United States: Headquarters in North Carolina, and Regional Offices in Texas, Florida, and Missouri.
