GTG's GeoBlade Suite Provides Enterprise GIS Solutions to Local Governments

Goldsboro, N.C. – Geographic Technologies Group, Inc. (GTG) is pleased to offer the GeoBlade software suite to local government agencies in need of an enterprise GIS solution.

“GeoBlade is based on the industry standard ESRI platform and complies with our client’s current investments in ArcGIS Server and other ESRI platforms,” said James Kelt, regional manager for GTG. “This technology gives our clients the ability to take GIS to the next level by empowering every user with the tools to make intelligent geospatial decisions without requiring expensive software and extensive training.”

Geared toward any department or division, the GeoBlade software suite is equipped with a highly customizable core viewer. GeoBlade Viewer serves as the backbone of the toolset. Additional department-specific plug-ins, called “blades,” can be added to the core viewer. Each blade is also customizable and falls under one or more of the following disciplines: Community Development, Utility, Public Access, and Public Safety.

GeoBlade’s easy-to-use, convenient features save time and money, making jobs much easier for busy local government professionals. The application incorporates toolbar docking, floatable windows, multiple query result sets, and many more convenient components. It also has the ability to import as many published map services as you’d like, containing whatever layers you specify.

“GeoBlade clients immediately see a return on investment after the installation and short training period of the application,” said Kelt. “This application toolset has the ability to save time, money, and lives.”
