

The City of Key West, Florida Selects Geographic Technologies Group (GTG) to Implement New GIS Software Solutions

Goldsboro, NC – Geographic Technologies Group, Inc. (GTG) announced today that the **City of Key West, Florida** has procured additional products from GTG's LG GIS software suite. The City will be implementing LGcrimesweb to expand the City's existing LG platform which already includes other GIS applications such as LGcrimes and LGdispatch.

LGcrimesweb aids in the visualization and dissemination of police incident information. Administrators can fully customize the way data is presented. LGCrimesweb allows an agency to display crimes as individual points or generalized to any geography such as neighborhoods. The Crimesweb administrator can decide how much information to make available for public consumption. LGcrimesweb is an affordable and easy-to-use crime reporting, mapping and querying software application designed for towns, cities and counties of all sizes and complexities.

Curtis Hinton, CEO and Co-owner of GTG, stated that; "Key West understands that its citizens and visitors are demanding consumers of information. City staff want to provide the public with the right amount of information to enable informed decision making. Key West staff have moved rapidly from analyzing crime in house with LGCrimes to disseminating this information to the public. GTG sees this as a nation-wide trend. People are demanding to know where and when crime is occurring. Forward thinking police organizations are embracing this concept and empowering their citizens and visitors. We are eager to work side by side with Key West staff to put them on the front lines of maintaining Key West's place as one of the crown jewels of America"

About Geographic Technologies Group, Inc. (GTG):

GTG is a full-service local government GIS consulting company offering specialized experience in the planning, design, implementation, and procurement of geo-technologies. GTG has unmatched technical GIS capabilities, demonstrated successes, international experience, and a reputation for successfully implementing the right solutions.
