

McHenry County, Illinois Selects Geographic Technologies Group (GTG) to Implement New GIS Software Solutions

Goldboro, NC – Geographic Technologies Group, Inc. (GTG) announced today that **McHenry County, Illinois** has procured additional products from GTG's LG GIS software suite. The County will be implementing LGcrimes and LGaddress for Public Safety to expand the County's existing LG platform which already includes other GIS applications such as LGmobile and LGdispatch.

LGaddress for Public Safety is a Bi-directional Geographic Information System (GIS) software application that allows spatial management of SunGard HTE's Geofile. LGaddress for Public Safety offers innovative bi-directional GIS functionality including: Data that resides on a GIS can now be automatically and seamlessly integrated into the Geofile. LGaddress for Public Safety allows the user to update Geofile records with spatial information residing in a GIS. Spatial overlay capabilities allow the user a window into GIS and Geofile records.

LGcrimes is an affordable and easy-to-use crime reporting, mapping and analysis software application designed for towns, cities and counties of all sizes and complexities. LGcrimes aids in the visualization and analysis of police incident information. The spatial distribution of crimes will allow law enforcement professionals to maximize the use of departmental assets to satisfy the ever-growing demand for critical services. Public Safety departments with limited budgets and staff can now take advantage of crime analysis technology while leveraging their organization's investment in GIS technology.

James Kelt, GTG's Regional Manager and head of GTG's Texas office says, "McHenry County is currently undergoing a push for GIS mapping technology that ties directly to their existing investments in Computer Aided Dispatching and Incident Record Management Systems. By leveraging their existing GIS to visualize, map, query and analyze this data, County officials are now able to geographically represent calls for service and incident locations, ultimately making the County a safer place to live and work. Two tools that are critical in making this happen are LGcrimes and LGaddress for Public Safety."

About Geographic Technologies Group, Inc. (GTG):

GTG is a full-service local government GIS consulting company offering specialized experience in the planning, design, implementation, and procurement of geo-technologies. GTG has unmatched technical GIS capabilities, demonstrated successes, international experience, and a reputation for successfully implementing the right solutions. GTG develops GIS products that spatially enable various enterprise solutions and integrates an organization's IT investment via a common interface. GTG also offers stand alone products for land management, public safety, public access, touch screen technology, and utilities.
