## **The City of Paducah, Kentucky Selects Geographic Technologies Group (GTG) to Implement New GIS Software Solution**

**Longview, TX** – Geographic Technologies Group, Inc. (GTG) announced today that the **City of Paducah, Kentucky** has procured LGviewer from GTG's LG GIS software suite.

LGviewer provides a set of GIS tools in a simple to use desktop application. LGviewer allows for visualization of land management information. Local government professionals have long desired the ability to map and analyze the spatial distribution of all data that is tracked within their data storage. The land management module allows users to assign locations to each land management record. The LGviewer software is designed to leverage database data along with existing GIS data to provide a powerful set of tools for visualization and analysis.

The City also purchased one license of community maintenance module, and LGaddress for Land Management.

James Kelt, GTG's Regional Manager said, "LGviewer is specifically designed to take GIS to every City department with customizable queries, reports, print templates, and much more. One of the most powerful aspects of the application is the ability to extract information from various land management databases to plot locations for utilities meters, work orders, code enforcement violations, occupational licenses, accounts receivable, building permits, and much more. As these data layers become available in LGviewer, users immediately appreciate the power of using a GIS application when conducting daily operations. The City of Paducah has taken the next step in providing some of the most powerful GIS applications available in local government to every City Department."

The City's continuing utilization of GTG's LG products highlights the value of our products as an integrated and comprehensive set of GIS solutions that leverage the City's investment in their current applications. As with other fast-growing communities, the City of Paducah has embraced cutting-edge technology to improve services for its citizens.

### **About Geographic Technologies Group, Inc. (GTG):**

*GTG is a full-service local government GIS consulting company offering specialized experience in the planning, design, implementation, and procurement of geo-technologies. GTG has unmatched technical GIS capabilities, demonstrated successes, international experience, and a reputation for successfully implementing the right solutions. GTG develops GIS products that spatially enable various enterprise solutions and integrates an organization's IT investment via a common interface. GTG also offers stand alone products for land management, public safety, public access, touch screen technology, and utilities.*

*GTG has over 700 clients located throughout North America, the Caribbean, and Europe and serves all levels of government as well as the private sector. To support our clients, GTG maintains six offices located across the United States: Headquarters in North Carolina, and Regional Offices in Florida, Illinois, Oregon, Missouri, and Texas.*
