York County Natural Gas Selects Geographic Technologies Group (GTG) to Implement New GIS Software Solutions

Longview, TX – Geographic Technologies Group, Inc. (GTG) announced today that **York County, South Carolina Natural Gas** has upgraded LGviewer to Community Connect.

LGviewer provides a set of GIS tools in a simple to use desktop application. LGviewer allows for visualization of land management information. The LGviewer software is designed to leverage database data along with existing GIS data to provide a powerful set of tools for visualization and analysis.

LGcommunity connect is a GIS software solution that allows both HTE Land and Public Safety users to integrate AVL with LG software. The software allows GPS enabled vehicles to be tracked via the GIS interface. It takes GPS data from vehicles and places a moving map symbol on the GIS map interface that corresponds to the vehicles location in the real world. Historical AVL information is maintained with the product.

James Kelt, Regional Manager for GTG, stated that, "Automatic Vehicle Location (AVL) has traditionally been used in the Public Safety arena for Police, Fire and EMS mapping. Over the past year, we have seen more agencies leverage GPS technology in other scenarios. For York County Natural Gas, it made perfect sense to leverage GPS technology for use within LGviewer to show locations of their in the field fleet. LG Community Connect accomplishes the task of accurately and efficiently populating real time vehicle locations within the LG product line. By knowing where the vehicles are located as well as information about each vehicle, York County administrators can now allocate resources to specific areas to better serve their customers. This inexpensive module to LGviewer, ultimately keeps client satisfaction high and operational costs low."

About Geographic Technologies Group, Inc. (GTG):

GTG is a full-service local government GIS consulting company offering specialized experience in the planning, design, implementation, and procurement of geo-technologies. GTG has unmatched technical GIS capabilities, demonstrated successes, international experience, and a reputation for successfully implementing the right solutions. GTG develops GIS products that spatially enable various enterprise solutions and integrates an organization's IT investment via a common interface. GTG also offers stand alone products for land management, public safety, public access, touch screen technology, and utilities.

GTG has over 700 clients located throughout North America, the Caribbean, and Europe and serves all levels of government as well as the private sector. To support our clients, GTG maintains four offices located across the United States: Headquarters in North Carolina, and Regional Offices in Florida, Missouri, and Texas.
