

## **Yuba County, California Selects Geographic Technologies Group (GTG) to Implement New GIS Software Solutions**

**Portland, OR** – Geographic Technologies Group, Inc. (GTG) announced today that **Yuba County, California** has procured additional product functionality from GTG's LG GIS software suite. The County will be implementing additional licenses of LGmobile software to expand the County's existing LG platform which already includes other GIS applications such as LGdispatch and LGcrimes.

LGmobile is the latest breakthrough in mobile software solutions. LGmobile is a field-based mobile GIS mapping software solution used in public safety vehicles. It has a simple, easy-to-use interface that allows users to access important and vital dispatching information. Active incidents, AVL units and specific user events are all within the LGmobile interface.

David Kuhn, GTG's Regional Manager and head of GTG's West Coast office said, "LGmobile will complete the County's existing LG system. Now first responders will be able to see the same information as dispatchers, which will streamline communication back and forth. This type of field application will improve the level of service and can potentially save lives."

The County's continuing utilization of GTG's LG products highlights the value of our products as an integrated and comprehensive set of GIS solutions that leverage the County's investment in their current applications. As with other fast-growing communities, Yuba County has embraced cutting-edge technology to improve public safety services for its citizens.

### **About Geographic Technologies Group, Inc. (GTG):**

GTG is a full-service local government GIS consulting company offering specialized experience in the planning, design, implementation, and procurement of geo-technologies. GTG has unmatched technical GIS capabilities, demonstrated successes, international experience, and a reputation for successfully implementing the right solutions. GTG develops GIS products that spatially enable various enterprise solutions and integrates an organization's IT investment via a common interface. GTG also offers stand alone products for land management, public safety, public access, touch screen technology, and utilities.
